

NEWS RELEASE

Introducing Sana from Workday: Superintelligence for Work That Finds Answers, Takes Action, and Automates Workflows

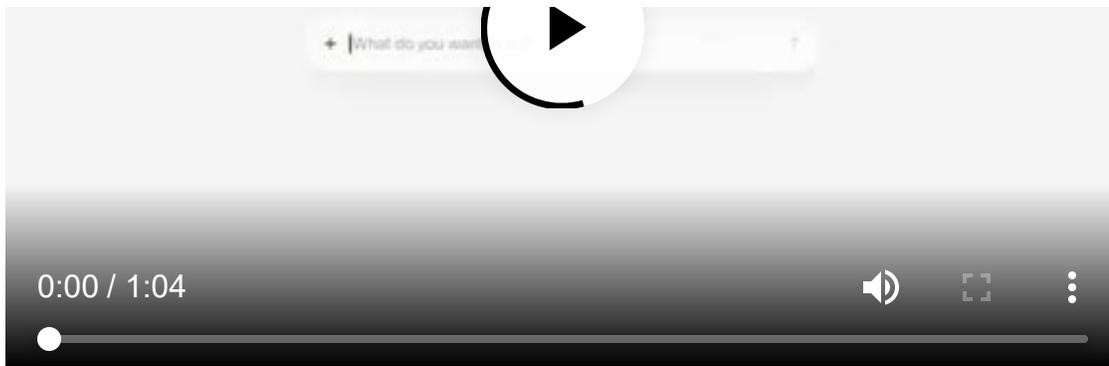

2026-03-17

Sana for Workday Brings a New Conversational AI Experience to Workday

New Sana Self-Service Agent Launches With 300+ Skills, and It Is Already Handling Everyday HR and Finance Tasks for Customers Worldwide

Sana Enterprise Connects Workday with Apps Like Gmail, Microsoft Outlook, Salesforce, and SharePoint to Complete Work Across Systems

PLEASANTON, Calif., March 17, 2026 /PRNewswire/ -- [Workday, Inc.](#) (NASDAQ: WDAY), the enterprise AI platform for managing **people**, **money**, and **agents**, today announced that **Sana from Workday** – superintelligence for work – is now available to customers worldwide. This includes: Sana for Workday, the new AI interface for Workday; Sana Self-Service Agent, which automates a broad range of HR and finance workflows; and Sana Enterprise, which unlocks Sana's AI capabilities beyond Workday. With Sana Enterprise, agents can find, orchestrate, and automate work across not only Workday, but all of the enterprise systems and applications employees use every day.

Today, many organizations fail to realize the impact of their AI investments because their agents, copilots, and other AI tools are spread across disconnected systems and outside the workflows that actually run the business. These bolted on AI tools often fail to deliver enterprise-grade accuracy because they don't share the same data, compliance context, and business rules as the core systems they operate on.

Sana from Workday changes that. Instead of sitting on the side, Sana brings AI into the core systems and processes that run the business. It doesn't just surface information – it completes HR and finance tasks using the same security model, configuration, and policies companies already rely on, so answers and actions are grounded in the right data and rules. Because Sana runs inside Workday's existing security, permissions, and audit framework, agents inherit the same controls customers trust for sensitive HR and finance data, enabling truly enterprise-grade results.

"AI only works in the enterprise when it's connected to trusted, deterministic systems, and that hybrid architecture is exactly what Workday is building," said Aneel Bhusri, co-founder, CEO and chair, Workday. "Sana is what brings it all together. It's not just a new Workday experience – it's a powerful way for people to search, reason, and orchestrate work across the enterprise."

AI Agents Grounded in Workday's People and Finance Data

Unlike standalone assistants or copilots that primarily provide suggestions, Sana from Workday orchestrates AI agents that take action across systems. It brings together four core capabilities:

- **Find:** Gives instant, cited answers from company knowledge and Workday data. For example, an employee can ask, "How many vacation days do I have left?" or "What's the current contract value of Acme Inc.?" and get a clear answer in seconds.
- **Act:** Executes tasks across connected systems, grounded in enterprise permissions. For example, an employee can ask, "Update my home address and show how this affects my tax forms and benefits" or

"Update the Acme Inc. contract value to \$431K."

- **Build:** Turns knowledge into ready-to-use dashboards, summaries, and documents. For example, a manager can ask, "Generate a dashboard showing pipeline stage and interview feedback from Workday Recruiting."
- **Automate:** Sets up no-code, multi-step workflows so agents can run work behind the scenes. For example, an employee can ask, "Set up a monthly workflow to review my email inbox for receipts, check them against policy, and send me a report to approve before submitting."

"Most AI projects today live in pilots and browser tabs – they look impressive in demos, but they don't change how work actually gets done," said Gerrit Kazmaier, president, product & technology, Workday. "With Sana from Workday, we're delivering a new way to get work done – where AI agents take action using trusted context, not just provide suggestions. Sana from Workday will be the last software you have to learn – a single experience where AI is embedded directly in the flow of work."

A New AI-First Experience for Workday

Sana for Workday is the new unified AI interface for Workday, giving CHROs, CFOs, managers, and employees a single place to ask questions, trigger workflows, and work with Workday agents. It becomes the new way employees use Workday – replacing traditional menus and navigation with a transformative conversational AI experience.

Workday customers now have access to the Sana Self-Service Agent, which instantly finds and summarizes information from Workday and other knowledge sources, so employees get clear, personalized answers to their questions right away. The agent understands who the user is and what they're trying to do and can assist with tasks or handle everyday actions on their behalf. With 300+ skills across areas like pay, time, and absence, the Sana Self-Service Agent is already handling everyday HR and finance tasks for customers worldwide – reducing support tickets and freeing HR and finance teams to focus on higher-value work.

Sana for Workday and the Sana Self-Service Agent are now available to all Workday customers through Workday Flex Credits – no extra license, no separate paywall. Customers receive an allocation of Flex Credits as part of their Workday subscription, so they can start using Sana for Workday and the Self-Service Agent now.

Sana Enterprise Extends the Power of Workday to the Tools People Already Use

Workday also launched Sana Enterprise, which extends the Sana experience beyond Workday into the rest of the enterprise, with connectors for Box, Confluence, Gmail, Google Calendar, Google Contacts, Google Drive, Google Tasks, Jira, Linear, Microsoft Outlook Calendar, Microsoft Outlook Email, Miro, Notion, Salesforce, ServiceNow,

SharePoint, Slack, and Zoom – with more planned for later this year.

With these integrations, employees can complete work across multiple systems in a single conversation instead of searching through each application. For example, employees can find the latest version of a document in Google Drive or SharePoint and share it with their team; check availability and schedule meetings in Outlook or Google Calendar; or review Jira tickets for a project and identify potential blockers – all through Sana Enterprise.

"Sana is the closest thing we have to a superintelligent co-worker. It sees the full picture of your organization in Workday, it knows which systems to touch, and it can coordinate the steps between them," said Joel Hellermark, senior vice president and general manager of AI, Workday. "Instead of dozens of tickets and handoffs, you ask for an outcome and Sana delivers it."

What People are Saying

"Within 40 days, Sana became our default AI interface at work – we reached 90% adoption and retired 400 ChatGPT licenses," said Joonas Honka, head of AI and analytics, Berner.

"At Cheffelo, Sana has gone from an AI experiment to our AI backbone – the place where work starts, knowledge lives, and agentic workflows run in the background so our teams can focus on strategic decisions and customers," said Anton Nytorp, CTO, Cheffelo.

"We've gone from 'Can we automate this one task?' to 'How should this entire process work if we assume Sana can handle 80% of the execution?'" said Alexander Bergström, GTM lead, Telavox. "That mindset shift is where the real value comes from."

"Workday's integration with Sana is a major milestone in the market, giving HR and business users a highly intelligent, AI-native experience to automate work, solve problems, and build agentic solutions," said Josh Bersin, global industry analyst and CEO of The Josh Bersin Company. "We see Sana as a leader in this space and the decision to build Sana into the Workday experience will transform Workday's business and the entire customer and employee experience."

Availability

Sana for Workday and the Sana Self-Service Agent are now available to Workday customers through Workday Flex Credits. Sana Enterprise is now available with Workday Human Capital Management (HCM) or Workday Financial Management and through Workday Flex Credits.

Forward-Looking Statements

This press release contains forward-looking statements including, among other things, statements regarding Workday's plans, beliefs, and expectations. These forward-looking statements are based only on currently available information and our current beliefs, expectations, and assumptions. Because forward-looking statements relate to the future, they are subject to inherent risks, uncertainties, assumptions, and changes in circumstances that are difficult to predict and many of which are outside of our control. If the risks materialize, assumptions prove incorrect, or we experience unexpected changes in circumstances, actual results could differ materially from the results implied by these forward-looking statements, and therefore you should not rely on any forward-looking statements. Risks include, but are not limited to, risks described in our filings with the Securities and Exchange Commission ("SEC"), including our most recent report on Form 10-Q or Form 10-K and other reports that we have filed and will file with the SEC from time to time, which could cause actual results to vary from expectations. Workday assumes no obligation to, and does not currently intend to, update any such forward-looking statements after the date of this release, except as required by law.

Any unreleased services, features, or functions referenced in this document, our website, or other press releases or public statements that are not currently available are subject to change at Workday's discretion and may not be delivered as planned or at all. Customers who purchase Workday services should make their purchase decisions based upon services, features, and functions that are currently available.
